

Yixing Protection Boxes

Overview

Compared with cold welding, hot welding can improve the optical properties of the connector, increase the effective connection rate to 100%, prolong the service life of the product and reduce maintenance costs. FTTH split cables are spliced and protected by fiber splicing protection sleeves. Then put the spliced FTTH drop cable and heat shrinkable fiber splice protective sleeve into the square FTTH drop cable splicing kit optical fiber cable protection box. Finally, install the FTTH split cable splicing protection box on the wall or in the fiber optic distribution box.
